Managed SIEM

Many companies still use only reactive mechanisms to protect themselves against cyber attacks. However, these conventional measures can usually only limit the damage. In the field of cyber security, the best chance of defense lies in the early detection of potential threats. Security Information and Event Management (SIEM) is a great prevention approach in this context. LogRhythm's impressive security intelligence platform, a leader in the Gartner SIEM Magic Quadrant, detects anomalies in real time, with the ability to take immediate countermeasures and avert serious threats. As a LogRhythm Services Authorized Partner, we enable you to use this solution in conjunction with our DTS Security Operations Center (SOC) as integrated, proactive cyber protection in the form of a central security control center.

- Continuous transparency of the IT environment in real time

- Multi-dimensional identification of anomalies in user, host & network behavior

- Independent monitoring of forensic data & file integrity

- State-of-the-art hardware analysis & analysis of large datasets

- Intelligent correlation & pattern recognition

- Minimum detection & response time

- Scalable approach & workflow-enabled automation

- DTS managed services

Our DTS SOC is a significant advance in cyber security, especially when combined with LogRhythm's state-of-the-art SIEM. Protection against modern threat scenarios requires end-to-end visibility of the entire IT environment. In an emergency, speed and precision are required. In a fully integrated platform, LogRhythms SIEM combines log management, file integrity monitoring and hardware analytics, monitoring and artificial intelligence with forensic host and network data. The global overview of all activities enables the detection of anomalies that would otherwise go unnoticed, including greatly reduced detection and response time.

The DTS SOC is our central security control center for 24/7 monitoring of and support for your IT infrastructure and data. With the help of LogRhythm SIEM, we provide end-to-end visibility, analyze specific IT resources and data in near real time, detect the aforementioned anomalies, issue alerts and defensive recommendations and continuously compile new rules for effective defense. Our highly qualified, German and English-speaking security experts provide round-the-clock security: managed security services, active monitoring & analysis of your IT systems, detection and removal of IT vulnerabilities, centralized security management, alerts & defensive measures, security assessments, event and log management, compliance and reporting.
